SUMMARY

Assistant System Engineer at TCS with L2 production support experience and recent development work on a Cordova-based Android insurance application, including requirement analysis, feature implementation and AWS S3-based resource delivery. Skilled in Java, JavaScript, SQL, REST API testing and debugging; building Spring Boot and DSA skills toward backend development.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Technologies: Cordova (Android), REST APIs, JSON, AWS S3, Spring Boot (Learning)

Testing: Manual Testing, Functional Testing, Regression Testing, API Testing (Postman)

Tools: Git/GitHub, Android Studio, Eclipse, VS Code, Postman, JIRA, SVN

Others: Data Structures & Algorithms (Java), OOP, DBMS, Debugging, RCA, Production Support, Linux (basic)

EXPERIENCE

Tata Consultancy Services (TCS)

Jan 2025 – Present

Assistant System Engineer

- Reduced Android application size in UAT from **210 MB to 130 MB** by hosting large JavaScript rates files on **AWS S3**, downloading them on first product load and storing them locally for reuse and offline access.
- Evaluated Play Asset Delivery and zip/unzip approaches before choosing the S3-based solution, as compression gave no further size reduction.
- Worked with the business team to analyse requirements and implement new insurance product features in a **Cordova**-based Android app using **HTML, CSS and JavaScript**, including premium calculation, rider and age/term rules.
- Proposed the **Centralized Link History** feature, built the proof of concept and supported UAT; now live in production, it lets agents retrieve customer FR links without raising tickets, contributing to nearly **30% reduction** in repetitive tickets.
- Supported production operations for an insurance application: analysed logs, SQL data and API responses to find root causes, coordinated with developers on fixes and prepared documentation to reduce repeat issues.
- Improved SLA adherence for my support queue from **65% to over 95%** through ticket prioritisation, root cause analysis and timely coordination on production fixes.
- Performed API validation (**Postman**), SQL data verification, regression and post-release testing on production deployments.

PROJECTS

CineMate – Android Movie Application

[GitHub](#) ➤

- Built a Java Android app to browse trending, popular and top-rated movies using the TMDb REST API with **Retrofit2**, **Gson** and JSON.
- Followed **MVP architecture**; used RecyclerView, Glide and Lottie for a responsive UI.
- **Tech Stack:** Java, Retrofit2, REST APIs, JSON, Gson, RecyclerView, Glide, Lottie, MVP

INK – Quotes & Notes Android Application

[GitHub](#) ➤

- Built an Android app to browse categorized quotes, save favourites, create custom quotes, and copy or share them.
- Used **Room Database (SQLite)**, Navigation Components and RecyclerView for local persistence and navigation.
- **Tech Stack:** Java, Room Database, SQLite, RecyclerView, Navigation Component, Android Studio

EDUCATION

Institute of Information Technology & Management, Janakpuri, Delhi
Bachelor of Computer Applications (BCA)

2021–2024
CGPA: 7.2

ACHIEVEMENTS

- Ranked among the **top 5%** of 500 trainees during the TCS Initial Learning Program.
- Awarded the **Star of the Month** for consistently meeting SLA targets and delivering production support excellence.
